

CLAIMS

I claim:

1. A fish bite indication device for removably positioning on a fishing rod having fishing line strung therethrough, said device comprising:
a ring member having a generally circular shape, said ring member having a substantially smooth outer surface, said ring member having an inner diameter generally between $\frac{1}{2}$ inch and 2 inches, wherein said ring member is positioned over an end of the fishing rod such that said ring member is moved upwardly on the fishing rod when the fishing line is pulled outwardly away from the fishing rod.
2. The fish bite indication device of claim 1, wherein said ring member comprises a plastic material having buoyancy in water.
3. The fish bite indication device of claim 1, wherein said plastic material is phosphorescent.
4. The fish bite indication device of claim 1, further including a loop being attached to said ring member, said loop being positioned on an outer circumference of said ring member, said loop having an inner diameter smaller than an inner diameter of said ring member, an elongated tether having a first end and a second end, said first end being attached to said loop.
5. A fish bite indication device for removably positioning on a fishing rod having fishing line strung therethrough, said device comprising:

a ring member having a generally circular shape, said ring member having a substantially smooth outer surface, said ring member having an inner diameter generally between $\frac{1}{2}$ inch and 2 inches, said ring member comprising a plastic material, said plastic material being buoyant in water, said plastic material being phosphorescent;

a loop being attached to said ring member, said loop being positioned on an outer circumference of said ring member, said loop having an inner diameter smaller than said inner diameter of said ring member;

an elongated tether having a first end and a second end, said first end being attached to said loop; and

wherein said ring member is positioned over an end of the fishing rod such that said ring member is moved upwardly on the fishing rod when the fishing line is pulled outwardly away from the fishing rod.
